MUMBAI 400 064

ACADEMIC YEAR – 2026-27

Prahladrai Dalmia Lions College of Commerce & Economics

Sunder Nagar, Malad (West), Mumbai, 400 064

Re-accredited with **'A'** Grade in III Cycle of NAAC

ISO 21001: 2018 Certified

CERTIFICATE

I hereby certify that Mr. **SAMIULLAH MANAUWAR BAGWAN**, Student of Prahladrai Dalmia Lions College of Commerce & Economics studying in T.Y.B.Sc.(Information Technology) Semester V, has completed a project titled "**CYBER AWARENESS CAMPAIGN FOR RURAL COMMUNITIES**" in the area of "Cybersecurity Awareness and Digital Literacy for Rural Communities "for the academic year 2026-27. To the best of my knowledge the work of the student is original and the information included in the project is correct.

Internal Examiner Head of the Department Principal

DECLARATION

I, **Mr. SAMIULLAH MANAUWAR BAGWAN**, Student of Prahladrai Dalmia Lions College of Commerce & Economics studying in T.Y.B.Sc.(Information Technology) Semester V, hereby declare that I have completed the field project entitled **"CYBER AWARENESS CAMPAIGN FOR RURAL COMMUNITIES"** during the academic year 2026-2027.

The report work is original and the information/data included in the report is true emerging from the primary and/ secondary data gathered and analyze as part of this project.

Due credit is extended on the work of Literature Secondary Survey by endorsing it in the Bibliography as per prescribed format.

SAMIULLAH BAGWAN

ACKNOWLEDGEMENT

To list who all helped me is difficult because they are so numerous and the depth is so enormous.

I would like to acknowledge the following as being an idealistic channel and fresh dimension and completion of project.

I take this opportunity to thank the **University of Mumbai** for giving me the chance to do this project.

I would like to thank my **Principal Prof. (Dr.) D. N. Ganjewar** and our **Vice-Principal Ms. Subhashini Naikar** for providing the necessary facilities required for completion of this project.

I take this opportunity to thank **our coordinator CA Durgesh Y. Kenkre** for his moral support and guidance.

I would also like to express my sincere gratitude towards my project guide **Dr. Rupali Mishra** whose guidance and care made the project successful.

I would like to thank my **college library** for having provided various reference books and magazines related to my project.

Lastly I would like to thank **each and every person directly or indir**ectly who helped me in the completion of the project, especially my **Parents and my peers** who supported me throughout my project.

ABSTRACT

The **"Cyber Awareness Campaign for Rural Communities"** is a web-based awareness platform designed to improve cybersecurity knowledge and digital safety among people living in rural areas. With the increasing use of smartphones, the internet, online banking, UPI, and digital government services, rural users are becoming more exposed to various cyber threats. Limited awareness about these threats can increase the risk of online fraud, scams, and misuse of personal information.

The proposed system provides **simple and easy-to-understand cybersecurity information** through educational videos, images, examples, quizzes, and awareness materials. It focuses on common cyber threats such as **phishing, OTP fraud, UPI scams, fake websites, fake job offers, malware, identity theft, and password attacks**. The platform also provides guidance on creating strong passwords, using two-factor authentication, identifying suspicious links, protecting personal information, and following safe online practices.

To make the campaign more interactive, users can participate in **online quizzes and awareness activities** to test and improve their cybersecurity knowledge. The system can also support **multiple languages**, making the information easier to understand for users from different rural communities.

The main objective of this project is to **increase digital literacy, promote safe internet usage, and reduce the risk of cybercrime through accessible cybersecurity education**. The platform aims to create a safer digital environment by helping rural users recognize common online threats and make informed decisions while using digital services.

CHAPTER 1. INTRODUCTION

1.1 Objectives

The main objectives of the Cyber Awareness Campaign are:

1. To create awareness among rural communities about common cyber threats.
2. To educate users about safe internet and smartphone usage.
3. To help people identify phishing messages, fake calls, suspicious links, and online scams.
4. To promote safe practices while using UPI, online banking, and other digital payment services.
5. To educate users about protecting passwords, OTPs, PINs, and personal information.
6. To encourage responsible use of social media and other online platforms.
7. To provide basic guidance on what to do and where to report cyber fraud.
8. To improve digital confidence and cybersecurity knowledge among rural users.

1.2 Background Information

The growth of digital technology has provided many opportunities for rural communities. People can now use online banking, digital payments, e-commerce, education platforms, healthcare services, and government services without having to travel long distances. While these services make life easier, they also expose users to different types of cyber threats.

Cybercriminals use various methods to deceive users. For example, they may send fake messages containing suspicious links, make fraudulent phone calls pretending to be bank officials, or offer fake jobs and prizes. Some scammers may ask users to share an OTP or PIN or make them scan a fraudulent QR code. Users who are not familiar with these techniques may unknowingly become victims.

Therefore, cybersecurity awareness is important, especially for new or less-experienced internet users. Providing information in simple language, using practical examples, and conducting awareness activities can help people recognize threats and take appropriate precautions.

1.3 Scope of the Project

The scope of this project is to develop a simple and user-friendly cyber awareness platform for rural communities. The platform will focus mainly on **prevention, education, and awareness** rather than investigating cybercrime.

The proposed website can include information about different types of cyber threats, cybersecurity tips, examples of scams, interactive quizzes, educational videos, and a section explaining how to respond to cyber fraud. The website can also provide content in regional languages such as **Marathi and Hindi** to make cybersecurity information easier to understand.

The project can be used as an awareness tool in rural schools, colleges, community centres, digital literacy programmes, and local awareness campaigns. Through this initiative, users can develop better cybersecurity habits and become more careful while using digital services.

Overall, the **Cyber Awareness Campaign for Rural Communities** aims to reduce the risk of cyber fraud by improving people's knowledge, awareness, and confidence in using digital technology safely.

CHAPTER 2. LITERATURE REVIEW

2.1 Cybersecurity Awareness

Previous studies show that lack of cybersecurity awareness is a major reason people become victims of online fraud and cyberattacks.

2.2 Digital Literacy in Rural Areas

The use of smartphones, internet, online banking, UPI, and government services is increasing in rural communities. However, many users still have limited knowledge about digital safety.

2.3 Common Cyber Threats

Research highlights threats such as phishing, OTP fraud, fake websites, UPI scams, fake job offers, malware, and identity theft as common risks faced by internet users.

2.4 Importance of Cyber Education

Studies suggest that educating users about strong passwords, two-factor authentication, suspicious links, OTP protection, and safe browsing can reduce the risk of cyber fraud.

2.5 Interactive Learning

Interactive methods such as quizzes, videos, real-life scam examples, and demonstrations can make cybersecurity education easier and more effective.23.6 Multilingual Awareness

Providing cybersecurity information in regional languages can help rural users understand important safety practices more easily.

2.6 Research Gap

There is a need for a simple, accessible, interactive, and multilingual cybersecurity awareness platform specifically focused on the needs of rural communities.

CHAPTER 3. METHODOLOGY

3.1. Requirement Collection

Information was collected about common cyber threats affecting users, such as phishing, OTP fraud, UPI scams, fake links, online shopping fraud, and social media scams.

3.2. Research and Content Collection

Research papers, government cybersecurity resources, and other reliable sources were studied to collect accurate information about cyber safety and online fraud.

3.3. Website Development

A simple and user-friendly **cyber awareness website** was developed to provide information about different cyber threats, prevention methods, safety tips, and reporting guidance.

https://cybrsecuritys.netlify.app/

3.4. Awareness Videos

Educational cyber awareness videos **were created to explain cyber threats in a simple and understandable way. The videos demonstrate common scams and provide practical safety precautions.**

3.5. Google Forms

Google Forms were created to conduct a cyber-awareness quiz and collect responses from users. The forms help measure users' existing knowledge and their understanding after viewing the awareness content.

https://docs.google.com/forms/d/e/1FAIpQLSdDuRTjV0F_ZZ8bu18fRFM5u-zt9ayCiqbl5Ly6yxn4SKmwug/viewform?usp=header

3.6. Awareness Campaign

The website and videos were shared with users to spread awareness about cybersecurity. Users were encouraged to learn about cyber threats and follow safe digital practices.

3.7. Data Collection and Analysis

Responses collected through Google Forms were analyzed to understand users' cybersecurity awareness. The results help identify common knowledge gaps and evaluate the effectiveness of the campaign.

CHAPTER 4. DESCRIPTION OF THE COMMUNITY INTERACTIONS, OBSERVATIONS AND ANALYSIS

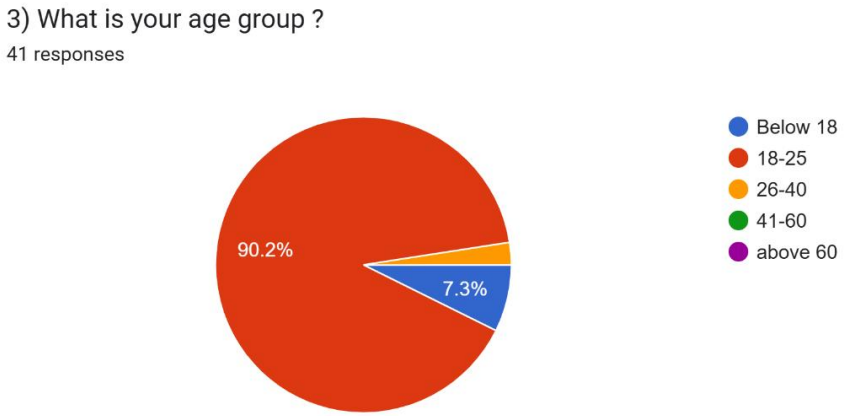

4.1. Community Interaction

As part of the **Cyber Awareness Campaign for Rural Communities**, a community interaction was conducted to understand people's awareness and knowledge of cybersecurity. A **Google Form questionnaire** was prepared and shared with participants to collect information about their use of digital services and their awareness of common cyber threats.

The questionnaire included questions related to **smartphone and internet usage, UPI and online banking, phishing, OTP fraud, suspicious links, fake websites, fake job offers, password security, and protection of personal information**.

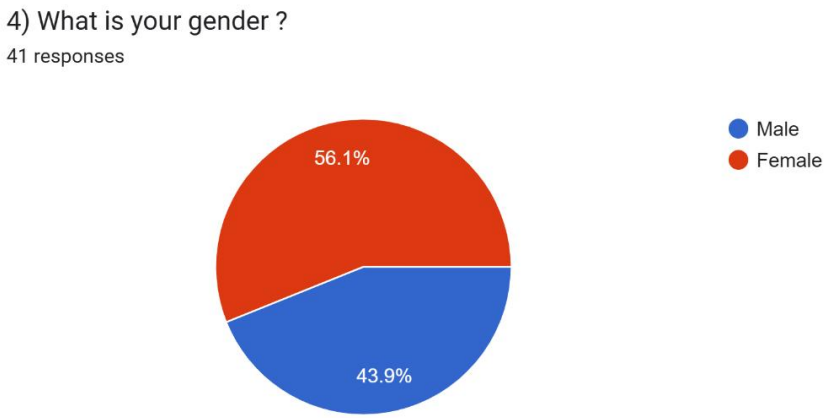

4.2. Observations and Analysis

Figure 4.2.1:

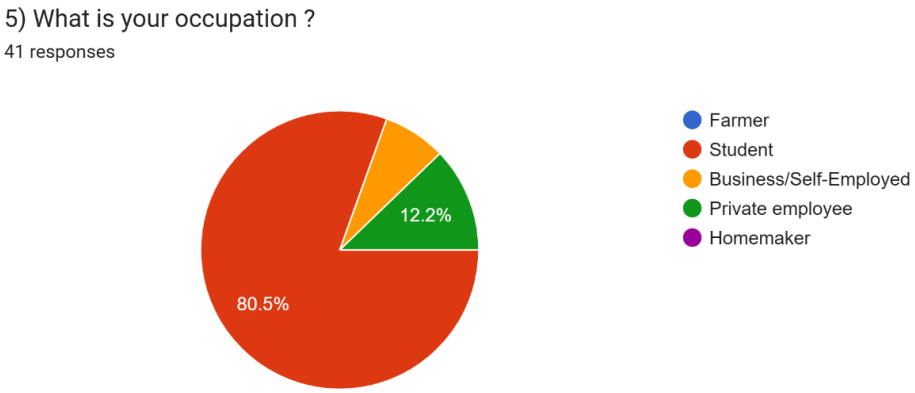

The pie chart shows that the majority of respondents (90.2%) belong to the 18–25 age group. Only 7.3% of respondents are below 18 years, while a very small proportion is above 60 years. This indicates that the survey mainly represents young adults. Therefore, cyber-awareness activities can particularly focus on the digital habits and safety needs of young users.

Figure :4.2.2:

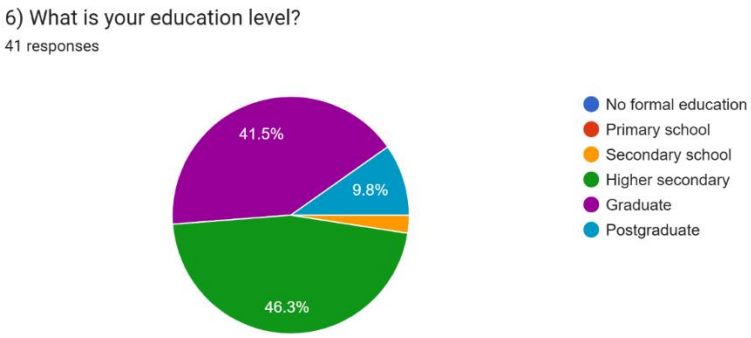

The gender distribution shows that **56.1% of respondents are male** and **43.9% are female**. The difference between the two groups is relatively small. This indicates participation from both male and female respondents. Cyber-awareness programs can therefore be designed to address the needs of the community as a whole.

Figures: 4.2.3

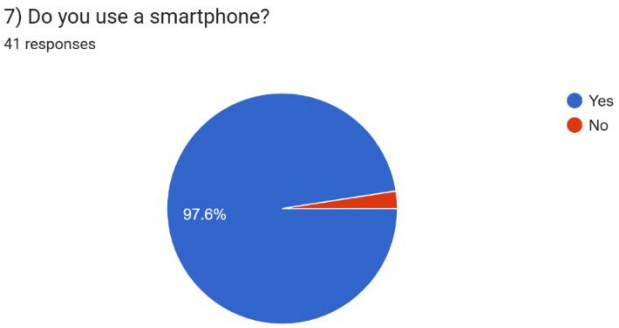

The occupation chart shows that **80.5% of respondents are students**. Around **12.2% are private employees**, while **7.3% are business/self-employed individuals**. No significant responses were recorded from farmers or homemakers. This shows that the survey population is largely made up of students and young working individuals

Figures: 4.2.4

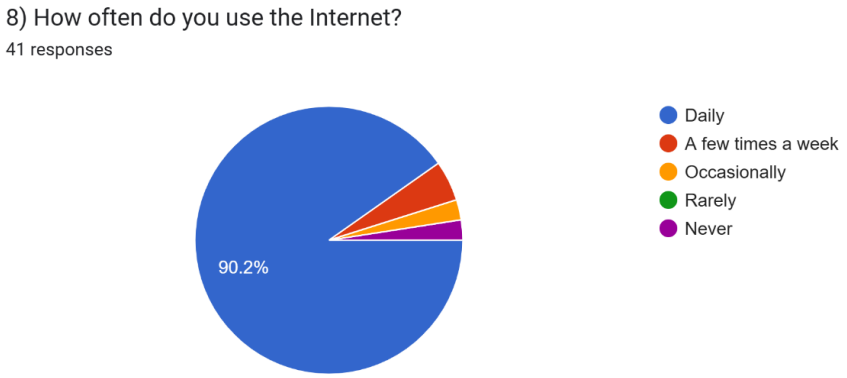

The chart indicates that **46.3% of respondents have completed higher secondary education**. A further **41.5% are graduates**, while **9.8% are postgraduates**. Only about 2.4% of respondents have secondary-level education. Overall, the respondents have a relatively high level of formal education.

Figures: 4.2.5

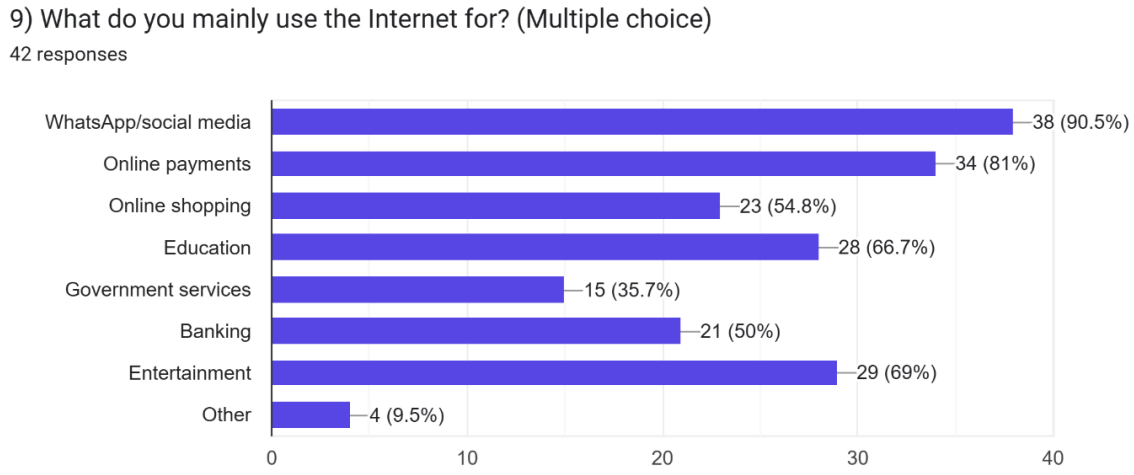

The pie chart shows that **97.6% of respondents use a smartphone**, while only 2.4% do not. This demonstrates that smartphones are almost universally used among the surveyed participants. Smartphones are therefore an important medium for accessing digital services. Cyber-awareness campaigns can use mobile-based communication to reach this population effectively.

Figures: 4.2.6

The chart shows that **90.2% of respondents use the Internet daily**. Only a small proportion use the Internet a few times a week or occasionally. This indicates a high level of regular Internet usage among participants. Consequently, awareness about online safety, scams and privacy is important for these users.

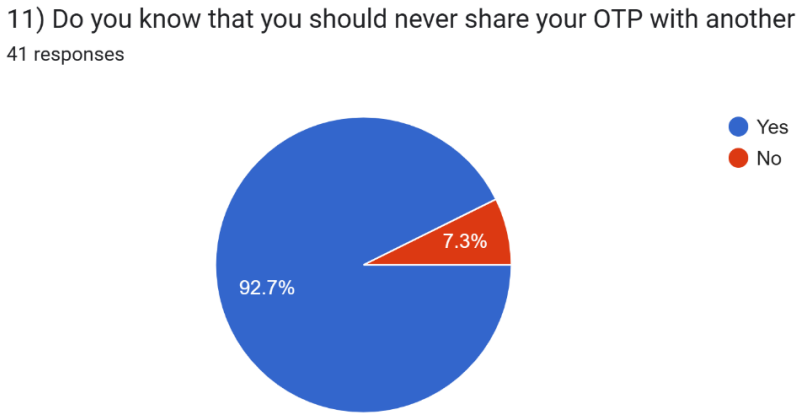

Figures: 4.2.7

The chart shows that “WhatsApp/social media” is the most common use of the Internet, with “38 respondents (90.5%)” selecting it. “Online payments” are the second most common, chosen by “34 respondents (81%)”, followed by entertainment and education. “Government services” are used by only “15 respondents (35.7%)”, showing lower usage compared to

other online activities. Overall, the results indicate that respondents mainly use the Internet for “social media, payments, entertainment, and education”

Figures: 4.2.8

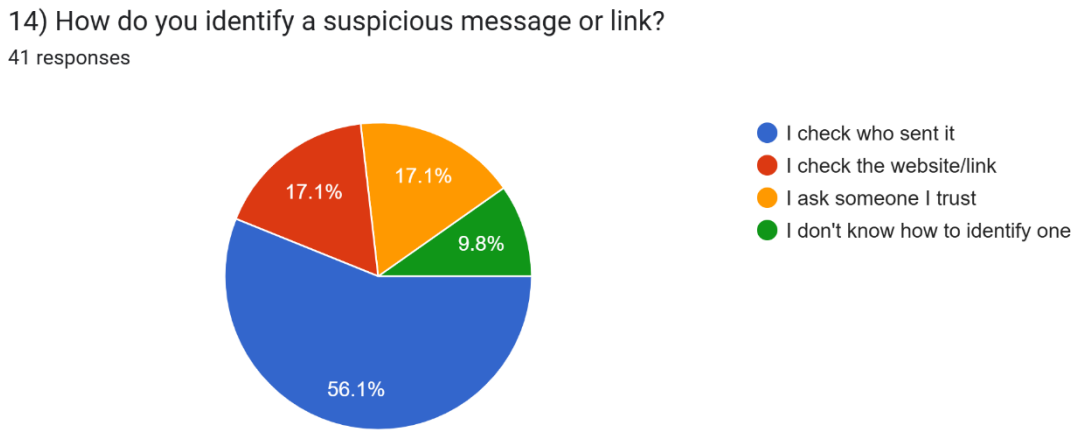

The pie chart shows that **92.7% of respondents know that OTPs should never be shared with another person**. Only **7.3% do not have this awareness**. This indicates that most respondents understand this basic aspect of digital security.

Figures: 4.2.9

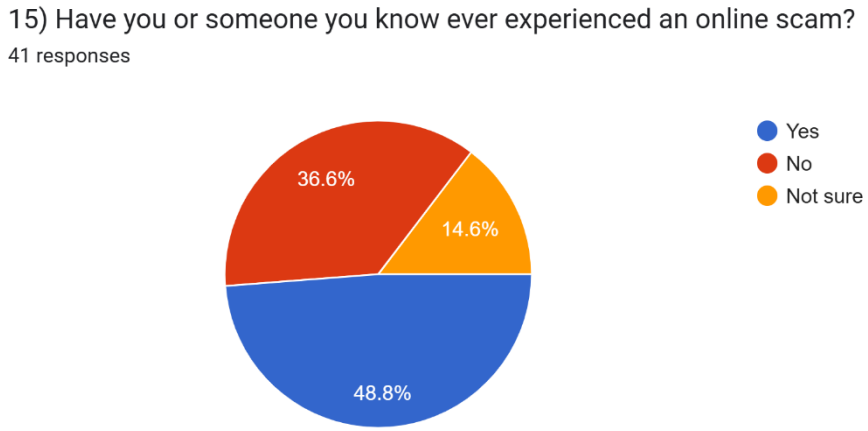

The chart shows that **68.3% of respondents have received a suspicious phone call, SMS, WhatsApp message or email**. About **17.1% were not sure**, while 14.6% reported that they had not received one. This indicates that suspicious digital communication is common among the respondents.

Figures: 4.2.10

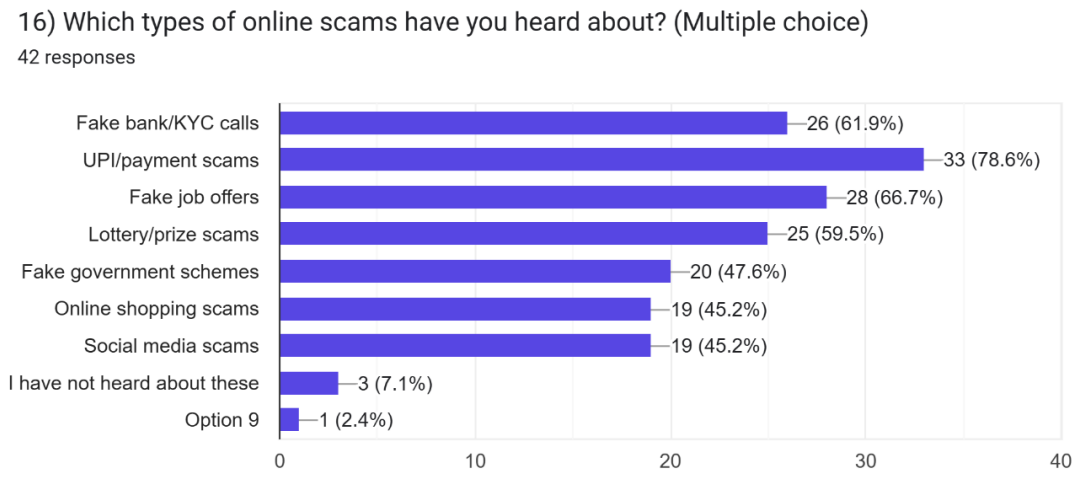

The chart shows that **56.1% of respondents check who sent a suspicious message or link**. Another **17.1% check the website/link**, while 17.1% ask someone they trust. Around **9.8% do not know how to identify a suspicious message**.

Figures: 4.2.11

The pie chart indicates that **48.8% of respondents or someone they know have experienced an online scam**. Around **36.6% reported no such experience**, while 14.6% were unsure. The results show that online scams are a relevant issue for a considerable portion of the respondents.

Figures: 4.2.12

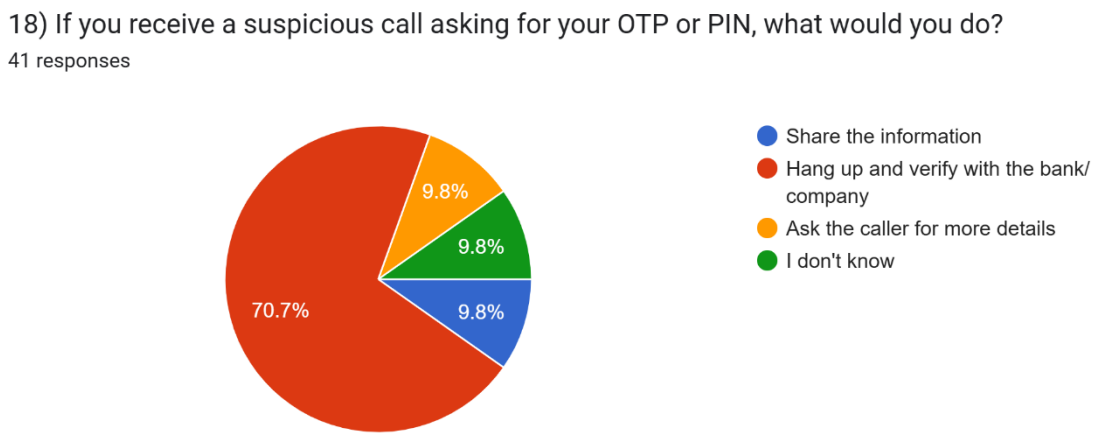

The chart shows that **UPI/payment scams** are the most commonly heard-about online scams, reported by **33 respondents (78.6%)**. **Fake job offers** were reported by **28 respondents (66.7%)**, followed by fake bank/KYC calls with **26 respondents (61.9%)**. Lottery/prize scams were also familiar to **25 respondents (59.5%)**, while awareness of government and online shopping scams was comparatively lower. Only **3 respondents (7.1%)** had not heard about any online scams, indicating a generally good level of scam awareness.

Figures: 4.2.13

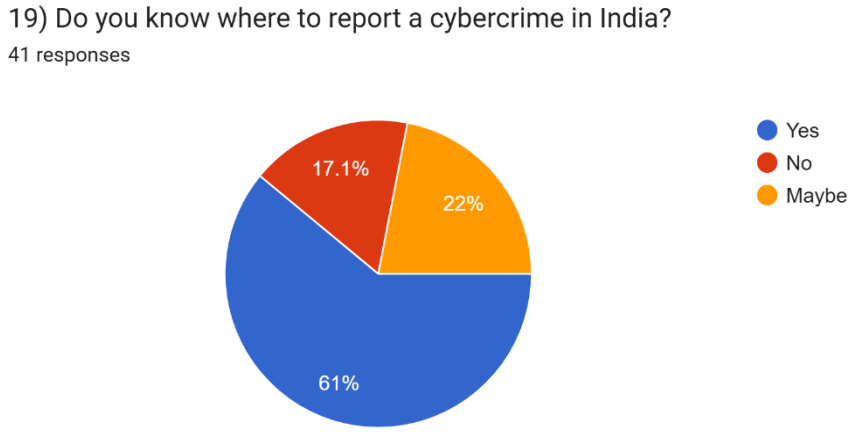

The chart shows that **53.7% of respondents are somewhat confident** in identifying an online scam. About **26.8% are not very confident**, while 14.6% are very confident. A small percentage are not confident at all.

Figures: 4.2.14

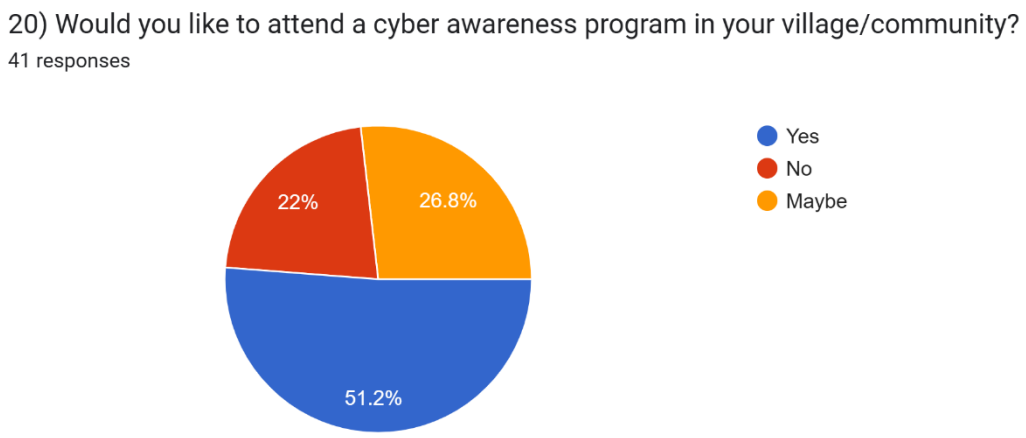

The chart shows that **70.7% of respondents would hang up and verify with the bank/company** if they received a suspicious OTP or PIN call. About 9.8% would share the information, ask the caller for more details, or report that they do not know what to do. The majority therefore show a cautious approach toward suspicious calls.

Figures: 4.2.15

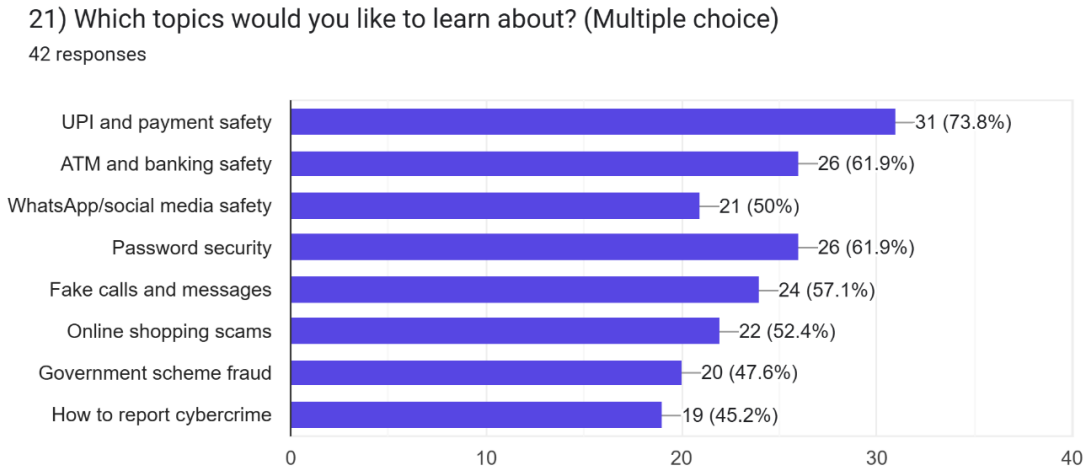

The pie chart shows that **61% of respondents know where to report a cybercrime in India**. About **22% are unsure**, while 17.1% do not know where to report it. This indicates that awareness of cybercrime reporting procedures is present but not universal.

Figures: 4.2.16

The chart shows that **51.2% of respondents would like to attend a cyber-awareness program** in their village or community. Another **26.8% selected "Maybe,"** while 22% were not interested. Thus, a considerable number of respondents are open to participating in awareness activities. Community level programs could provide practical knowledge about online safety and fraud prevention.

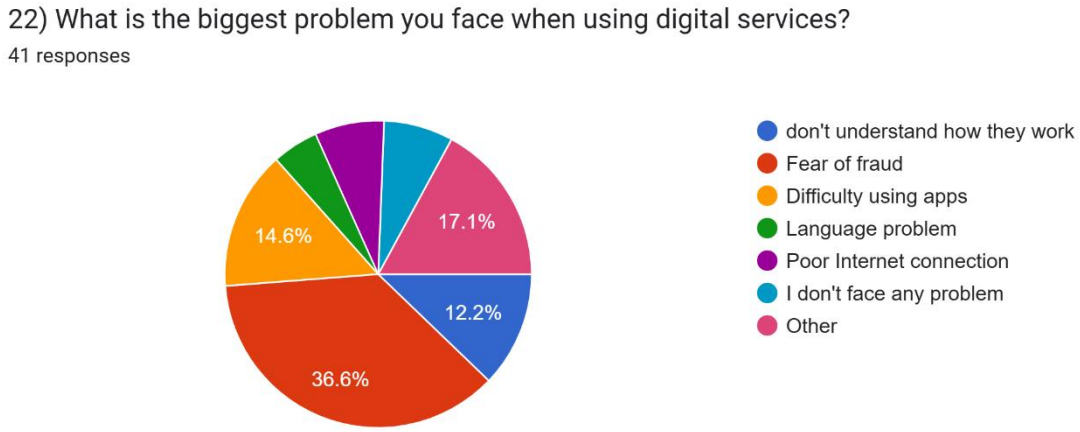

Figures: 4.2.17

The chart shows that **UPI and payment safety** is the most preferred topic, selected by **31 respondents (73.8%)**. **ATM and banking safety** and **password security** were each selected by **26 respondents (61.9%)**. Other important topics include **fake calls and messages (57.1%)** and **online**

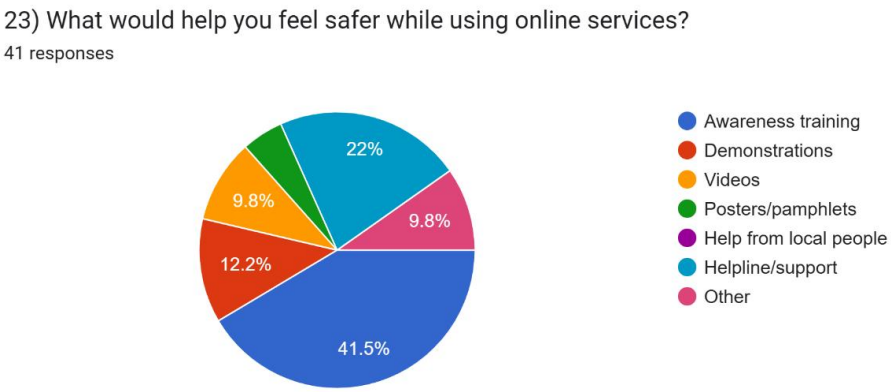

shopping scams (52.4%). Overall, the results show that respondents are particularly interested in learning about **safe digital payments, banking security, and protection from online scams**.

Figures: 4.2.18

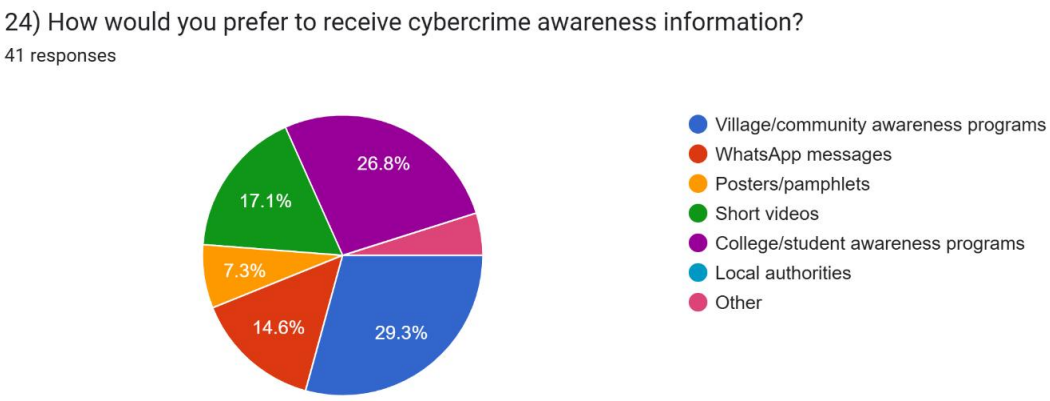

The chart shows that **fear of fraud is the biggest problem, reported by 36.6% of respondents**. Difficulty in using apps accounts for 14.6%, while 12.2% do not understand how digital services work. Other respondents mentioned language problems, poor Internet connectivity and other difficulties.

Figures: 4.2.19

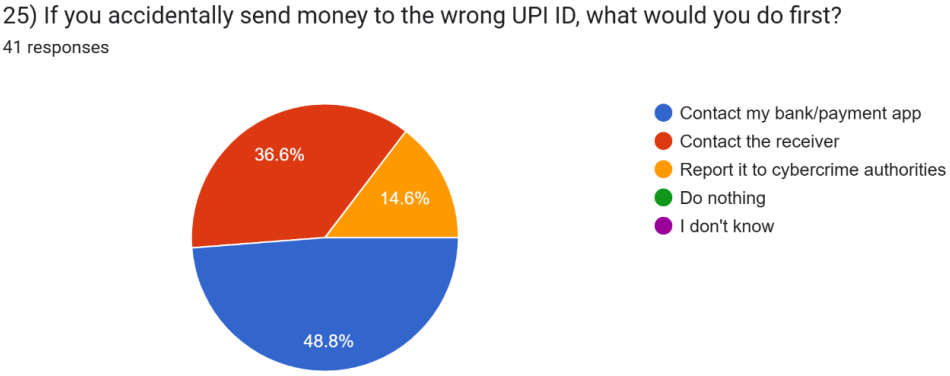

The chart shows that **41.5% of respondents believe awareness training would help them feel safer online**. About **22% selected helpline/support**, while demonstrations received 12.2%. Videos and other methods were also selected by smaller portions of respondents. This indicates that practical training and accessible support are important for improving users' confidence.

Figures: 4.2.20

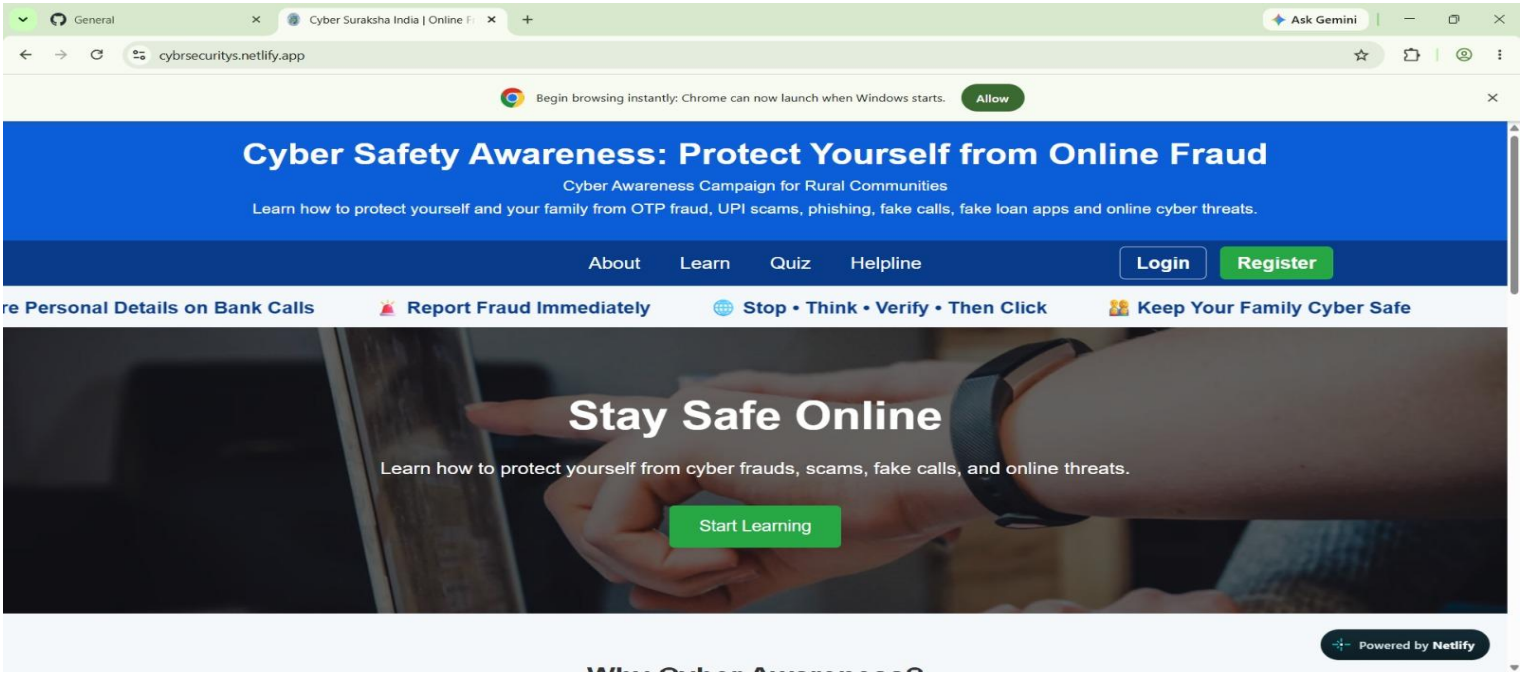

The chart shows that **29.3% prefer village community awareness programs**. About **26.8% prefer college/student awareness programs**, while 17.1% prefer short videos. WhatsApp messages and posters/pamphlets were selected by 14.6% and 7.3% respectively.

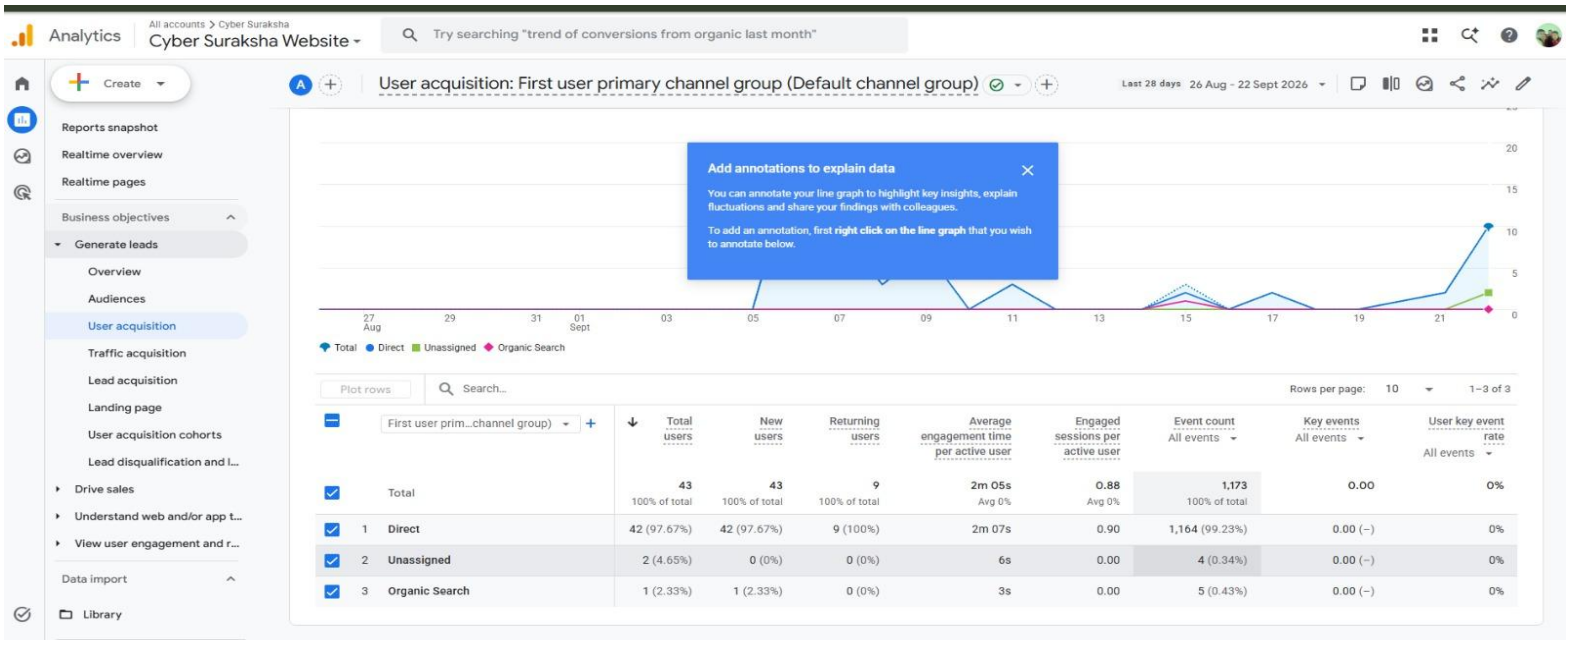

Figures: 4.2.21

The chart shows that **48.8% of respondents would first contact their bank/payment app** after sending money to the wrong UPI ID. Around **36.6% would contact the receiver**, while 14.6% would report the incident to cybercrime authorities. No significant percentage selected "Do nothing" or "I don't know." This indicates that most respondents would take some action after making an incorrect UPI transaction

Figures: 4.2.22

CHAPTER 5. CONCLUSION AND RECOMMENDATIONS

5.1. Conclusion

The "**Cyber Awareness Campaign for Rural Communities"** project was developed to spread awareness about safe and responsible use of digital technology among rural communities. The campaign focuses on common cyber threats such as "phishing, OTP fraud, UPI scams, fake websites, fake job offers, malware, and identity theft". Through awareness content, videos, examples, quizzes, and a questionnaire using Google Forms, the project helps users understand common online risks and the precautions they can take.

The analysis of the collected responses helps identify the level of "digital literacy and cybersecurity awareness" among participants. Overall, the project highlights the importance of educating people about safe online practices and encouraging them to verify information before sharing personal or financial details.

5.2. Recommendations

1. "Conduct regular awareness campaigns" in rural communities to explain new and common cyber threats.

2. Provide cybersecurity information in "local and regional languages" so that it is easy to understand.

3. Teach people "never to share OTPs, PINs, passwords, or banking details" with anyone.

4. Encourage the use of "strong passwords and two-factor authentication (2FA)".

5. Teach users to identify "fake links, phishing messages, fake websites, and fraudulent job offers".

6. Use "videos, images, real-life examples, and quizzes" to make cybersecurity education easier and more engaging.

7. Encourage people to "verify suspicious calls, messages, and payment requests" before taking any action.

8. Continue collecting feedback through "Google Forms or surveys" to measure changes in cybersecurity awareness.

9. Organize awareness sessions through “schools, colleges, community centers, and local organizations”.

10. Keep the campaign content “updated regularly” as new types of cyber fraud and online scams emerge.
